It has been shown that high-speed broadband Internet access enhances GDP growth. But Australia?s broadband speed lags well behind other advanced and even emerging economies. In April 2009, at the time the National Broadband Network (NBN) was announced, Australia?s average broadband download speed was ranked 39th in the world. And while the rollout of the NBN is now being ramped up, Australia recently slipped to 59th place.

In this lecture, Laureate Emeritus Professor Rod Tucker will provide an reprise of his melbourne talk an overview of competing broadband technologies, dive into more technical details, and address the question of what Australia needs to do to become a world leader in broadband connectivity.

Refreshments available from 12:00pm

Date and Time

Fri, 30 Oct 2015

12:00 - 13:30 AEDT

Location

Stockland Head Office
