Basically I am working in Telecom sector, as it(this industry) completely worked on the DC, as AC is converted to the DC with the help of rectifiers.

Apart from it mainly electrical engineer work is here as they know how to make connections effectively because they are highly trained professional.

Working in Australia as a Telecom Engineer at Mactec Electrical Perth ^[3] I will always enjoy the Following -

1. Tower climbing - Provide me to know how human look from 120meters - "amazing".
2. Installation and Reinstallations of 4g, 5g, 6g systems.
3. Electrical wiring quality.
4. A bright future I had with this because I get latest things that are to be launched in future market.
5. Traveling is the key concept behind the telecom Industry.

So It is the telecom Engineer Lifestyle, But it is most beautiful as a person travel across the country frequently.
