Book a Seat

The transformation of Public Safety Networks and the move to Long-Term Evolution (LTE) based broadband have been constant topics for the past several years. The COVID-19 pandemic has resulted in the accelerated adoption of digital solutions across the world, and in the Healthcare sector alone, we are seeing transformation that was previously considered several years away. Mobile Broadband is an essential connectivity layer that is required to enable technological innovations to make our communities safer and more resilient. Many of our First Responder networks still lack access to broadband data services that would dramatically increase their situational awareness of surrounding areas when fighting bush fires or speed up warnings to communities of approaching floods, tsunamis or volcanic eruptions.

Additional details and registration via the Nokia site:https://pages.nokia.com/T0057W-Public-Safety-Network-Transformation-and-Enhanced-Situational-Awareness.html [3]

This is the second event in a TelSoc series featuring relevant presentations organised by key industry participants. TelSoc looks forward to seeing you at this and future events.

Date and Time

Wed, 5 Aug 2020

13:00 - 14:00 AEST

Location

Webinar Event
Hosted by Nokia
Melbourne VIC 3000
Australia
