This event is fully booked or has passed.

The National Broadband Network (NBN) is a nation building project that will underpin Australia's telecommunications and broadband services for the next thirty years. It will provide many opportunities for national growth both socially and for participation in the global digital economy.

Mark's presentation will provide details of the technologies being used to build the NBN and discuss the opportunities for new technologies and engineering advances to enhance the NBN over time whilst reducing the rollout duration and cost. There are many challenges when embarking on a project of the magnitude of the NBN and the presentation will also cover some of the more pressing issues, including technology selection, construction and integrating legacy technologies and systems into a next generation network.

AFTER the conclusion of Mark's presentation at 1.30pm, there will be an opportunity for you to network with your industry colleagues over tea and coffee until 2.00pm.

Date and Time

Tue, 28 Apr 2015

12:30 - 14:00 AEST

Location

Telstra Conferencing Centre
Level 1 / 242 Exhibition St
Melbourne VIC 3000
Australia

Presenter(s)

Dr Mark Gregory - RMIT University

Dr Gregory holds a PhD and a Master of Engineering from RMIT University and a Bachelor of Engineering (Honours) from University of New South Wales. He continues to teach the next generation of engineers working as a Senior Lecturer in the School of Electrical and Computer Engineering, RMIT University. Mark has recently published a book on Security and the Networked Society which provides research and discussion relating to current issues surrounding telecommunications, the National Broadband Network and the Internet. He carries out research and writes extensively on telecommunications, privacy and security.
